

TriCal® 105

Awned Triticale

- **Very high soft dough forage yield**
- **Excellent performance in salty soil**
- **Stands up to lagoon water**

TriCal 105's seedling vigor gives this variety a great start, even in areas with difficult soil conditions. TriCal performs in saline conditions where other cereals have trouble making a crop. Then TriCal 105 goes on to finish with solid yields when the going gets tough. TriCal 105 has been the variety of choice for many years because of its vigorous tall dark leafy plants that are free of stripe rust and leaf rust and ability to stand up to lagoon water. Harvest is about 10-12 days later than wheat for soft dough silage.

Agronomic Traits:

Early Seedling Vigor:	Excellent
Lodging:	Moderate
Maturity:	11 days later than wheat to soft dough
Plant Color:	Dark Green
Head Color:	Grey Green
Awn Type:	Awned

Planting Rates:

Bushel weight:	56 lbs.
Seeds per Pound:	12,000
Rate (lbs/acre):	135 - 150

Adaptation Ratings:

Photosynthetic Type:	Cool Season
Photoperiod:	Insensitive
Water Requirement:	Low

Crop Use Information:

Life Cycle:	Annual
Ease of Establishment:	Good
Drought Stress:	Excellent
Wet Soil:	Good
Saline Soils (White Alkali):	Excellent
Saline - Sodic Soils (Black Alkali):	Excellent
Lagoon Water Tolerance:	Very Good
Hay:	No
Silage:	Excellent
Palatability:	Excellent

Disease/Insect/Nematode Ratings:

Stripe Rust:	MR
Leaf Rust:	R
Barley Yellow Dwarf Virus:	MR

Note: Ratings are based upon a number of years testing in numerous locations. Adverse environmental conditions and planting dates may alter a variety's performance, maturity, and resistance to certain diseases and insects.
