

# TriCal® 158EP

## Awned Triticale

- **Excellent resistance to lodging**
- **Top forage producer**
- **High grain yields**

TriCal 158EP is the latest result of TriCal's extensive forage research program. This all new variety stands up even in under the most extreme lodging pressure. In addition, TriCal 158EP was bred to be planted early, preferably in mid October without danger of frost damage. This first of its kind planting flexibility combined with outstanding yield and lodging resistance makes TriCal 158EP the choice for growers who need to plant early. Of course, TriCal 158EP continues the tradition of excellent triticale forage nutrition and palatability, ease of stand establishment, high grain production, and strong early season growth.

### Agronomic Traits:

Early Seedling Vigor:	Very Good
Lodging:	Excellent
Maturity:	9 days later than wheat to soft dough
Plant Color:	Dark Green
Head Color:	Grey Green
Awn Type:	Awned

### Planting Rates:

Bushel weight:	56 lbs.
Seeds per Pound:	12,000
Rate (lbs/acre):	135 - 150

### Adaptation Ratings:

Photosynthetic Type:	Cool Season
Photoperiod:	Insensitive
Water Requirement:	Low

### Crop Use Information:

Life Cycle:	Annual
Ease of Establishment:	Good
Drought Stress:	Excellent
Wet Soil:	Good
Saline Soils (White Alkali):	Good
Saline - Sodic Soils (Black Alkali):	Good
Lagoon Water Tolerance:	Very Good
Hay:	No
Silage:	Excellent
Palatability:	Excellent

### Disease/Insect/Nematode Ratings:

Stripe Rust:	MR
Leaf Rust:	R
Barley Yellow Dwarf Virus:	MR

Note: Ratings are based upon a number of years testing in numerous locations. Adverse environmental conditions and planting dates may alter a variety's performance, maturity, and resistance to certain diseases and insects.
