

1143

TRITICALE

Awnless. High-Yielding. Built for Southern Forage.

GROWTH HABIT

Winter

AWN TYPE

Awnless

MATURITY

Early

PLANT HEIGHT

Mid-Tall

Management Practices

Seeding Rates and Depth

For forage production, target:

- 1.2 to 1.3 million seeds per acre drilled
- 1.3 to 1.5 million seeds per acre broadcast

For best consistency, plant at:

- 1½ inches deep

Uniform depth supports uniform emergence—and uniform stands drive yield. Get out and verify planting depth in the field by checking your drill depth. Do not assume drill settings equal actual depth.

1143 is a Dependable Forage Choice.

1143 is an awnless, mid-tall triticale developed for dependable forage performance throughout the Southern Coastal Plains. 1143 gives growers a practical option for producing more forage from their acres. It has high silage yield and quality along with an excellent disease package. Its maturity is similar to TriCal 342, while its beardless profile adds versatility for forage-focused operations.

Forage First Genetics

Quick establishment and rapid forage production. A great choice for double or triple cropping.

Beardless

Completely awnless for a forage-focused fit.

Adaptable Maturity

Fits a wide range of Southeast systems.

Reliable Across Conditions

Excellent disease protection helps support dependable performance.
