Management Practices

Seeding Rates and Depth

For forage production, target:

- 1.2 to 1.3 million seeds per acre drilled
- 1.3 to 1.5 million seeds per acre broadcast

For best consistency, plant at:

- 1½ inches deep

Uniform depth supports uniform emergence—and uniform stands drive yield. Get out and verify planting depth in the field by checking your drill depth. Do not assume drill settings equal actual depth.

|-------------------------|------------------|-------------------------------|
| ✓ Dairy Silage Systems | ✓ Green Chop | ✓ Double-crop System |
| ✓ Beef Grazing & Silage | ✓ Hay Production | ✓ Manure Nutrient Utilization |

Gainer™ - More tons. Earlier harvest. More potential from every acre.

The fastest-maturing triticale on the market—giving you an earlier harvest window without giving up forage potential.

Early Maturity

Built to open up the harvest window and create more flexibility in the rotation.

Excellent stem-to-Leaf Ratio

A strong forage characteristic paired with good straw strength and a shorter plant height.

High Silage Yield & Quality

Produces a high number of tillers, helping develop a thick, productive stand.

Excellent Winterhardiness

Delivering dependable performance through winter conditions.

2023 Lancaster, Pennsylvania Trial Tons/Acre

High silage yield & quality — Gainer™ posted 10.2 tons/acre in the 2023 Lancaster, PA trial, the highest yield shown in the trial.
