Awnless

MATURITY

Late

PLANT HEIGHT

Medium Height
Excellent Leaf to
Stem Ratio

Management Practices

Seeding Rates and Depth

For forage production, target:

- 1.2 to 1.3 million seeds per acre drilled
- 1.3 to 1.5 million seeds per acre broadcast

For best consistency, plant at:

- 1½ inches deep

Uniform depth supports uniform emergence—and uniform stands drive yield. Get out and verify planting depth in the field by checking your drill depth. Do not assume drill settings equal actual depth.

Why Grow Gunner™?

Gunner™ is a completely awnless, high-yielding triticale that excels in grazing, silage, and double-crop systems. Its high leaf-to-stem ratio, strong forage quality, and flexible planting window help maximize productivity across a wide range of operations.

More Tonnage

Maximum yield per acre.

More Reliable

Built for strong standability and winter survival.

Dual planting window

Plant in the fall or spring for management flexibility.

More Profitability

More forage. More opportunity. More return on your acres.

2025–2026 Lancaster, PA Silage Trial

TriCal Gunner™ delivered impressive dry matter yield—bringing more tons and greater value potential to every acre.
