TRITICALE

Flexible Planting. Proven Performance.

GROWTH HABIT

Facultative
Spring or Fall

AWN TYPE

Awnletted
(Reduced Beard)

MATURITY

Medium

PLANT HEIGHT

Moderate

Management Practices

Seeding Rates and Depth

For forage production, target:

- 1.2 to 1.3 million seeds per acre drilled
- 1.3 to 1.5 million seeds per acre broadcast

For best consistency, plant at:

- 1½ inches deep

Uniform depth supports uniform emergence—and uniform stands drive yield. Get out and verify planting depth in the field by checking your drill depth. Do not assume drill settings equal actual depth.

Thor™ Delivers More Tons When It Counts

TriCal Thor™ is a dependable facultative triticale that offers the flexibility of spring or fall planting. With high silage yield potential, excellent forage quality, good straw strength and strong winterhardness, Thor delivers reliable performance across a wide range of growing environments.

High Yield Silage

Consistently ranks among the top for total forage production.

Winter Hardiness & Reliable

Good winter survival and strong seed vigor.

Dual planting window

Plant in the fall or spring for management flexibility.

Strong Agronomics

Good disease package and strong standability.

2026 Lancaster, PA Silage Trial

In this silage trial, Thor™ produced nearly 20% more dry matter than Hy Octane and more than 11% more than Nitrous, providing growers with additional forage inventory from the same acre.
