PLANT HEIGHT

Medium

Management Practices

Seeding Rates and Depth

For forage production, target:

- 1.2 to 1.3 million seeds per acre drilled
- 1.3 to 1.5 million seeds per acre broadcast

For best consistency, plant at:

- 1½ inches deep

Uniform depth supports uniform emergence—and uniform stands drive yield. Get out and verify planting depth in the field by checking your drill depth. Do not assume drill settings equal actual depth.

**Stay up-to-date
on Showtime™**

Best Uses

| ✓ Beef Grazing & Silage | ✓ Hay Production | ✓ Manure Nutrient Utilization |

Showtime™ Leads the Way

Showtime™ is a high-yielding winter triticale that delivers strong silage yield and quality, excellent winterhardness, and dependable performance for Midwest forage systems

Smooth, Awnless Head

Completely awnless, eliminating the long beards found on many small-grains.

Late Maturity

Later-maturing that provides a longer growing window.

Dependable Performance

Rust tolerance and good straw strength for Midwest forage systems.

Excellent Winterhardness

A true winter-type triticale for fall planting and overwintering before resuming growth in the spring.
