Management Practices

Seeding Rates and Depth

For forage production, target:

- 1.2 to 1.3 million seeds per acre drilled
- 1.3 to 1.5 million seeds per acre broadcast

For best consistency, plant at:

- 1½ inches deep

Uniform depth supports uniform emergence—and uniform stands drive yield. Get out and verify planting depth in the field by checking your drill depth. Do not assume drill settings equal actual depth.

Best Uses

- | | | |
|-------------------------|------------------|-------------------------------|
| ✓ Dairy Silage Systems | ✓ Green Chop | ✓ Double-crop System |
| ✓ Beef Grazing & Silage | ✓ Hay Production | ✓ Manure Nutrient Utilization |

Showtime™ delivers high silage yields, quality, winterhardiness, and rust tolerance.

Showtime™ is a late-maturing, awnless winter triticale offering high silage yield and quality, excellent winterhardiness, and rust tolerance.

Smooth, Awnless Head

Completely awnless, eliminating the long beards found on many small-grains.

Late Maturity

Later-maturing that provides a longer growing window.

High Tillering

Produces a high number of tillers, helping develop a thick, productive stand.

Excellent Winterhardiness

A true winter-type triticale for fall planting and overwintering before resuming growth in the spring.

2025 Culver, Oregon, Tons/Acre

In the 2025 Culver, Oregon trial, Showtime™ outperformed Forerunner and Hy Octane in yield, lower NDF for improved intake and digestibility.

Product	DM Yield	NDF %	RFV
Showtime™ 	5.73 	50.0 	120 
Forerunner	4.68	56.9	99
Hy Octane	4.60	57.7	99
